

Registrierung fuer einen WebService Production Key

Auf den folgenden Seiten wird die Registrierung eines Production Key für den FedEx WebService Productionserver <u>https://ws.fedex.com/web-services</u> beschrieben.

Die Authentifizierungsdaten für den Productionserver können auf dem Testserver nicht verwendet werden.

Der Startpunkt ist das FedEx Developer Ressource Center (DRC) erreichbar unter

www.fedex.com/us/developer

Es wird vorausgesetzt, dass dort ein Login vorhanden ist.

Loggen Sie sich in das DRC mit Ihren Benutzerdaten ein.

Move to Production

Technical Resources / FedEx Web Services for Shipping

Once the developer has completed the design, implementation, and testing of their projects, they must certify their applications with FedEx.

Certification is the process of determining if your implementation meets a number of requirements to achieve the safe, secure, and effective operation of your solution in the FedEx production environment. Corporate and commercial developers differ in terms of the certification process. For a synopsis of the basic process, see the certification outline below, or proceed directly to the full certification quidelines.

Certification for Corporate Developers

Standard Services:

- · Corporate Developers may self-certify
- Simply apply for a FedEx Production Meter Number and move into production status. A production meter number is required for each of your distribution centers. The same authorization key among multiple distribution centers is acceptable.

Advanced Services:

8

- Requires FedEx intervention and possible label certification: Call the FedEx Web Services Help Desk and request initiation of certification. Instructions will be emailed to you within one (1) business day
- All Advanced services require FedEx approval. Additionally for the shipment transaction, test shipping labels are required to be submitted and evaluated by FedEx
- Provide a signed End User License Agreement (EULA). You can review a copy of EULA here.
- · For the transactions that require label certification: Once label evaluation is successfully completed, your FedEx Web Services profile will be authorized for label generation. You can then apply for a production meter number.

Certification for Consultants working on behalf of a Corporate Client

· Consultants developing on behalf of a corporate customer must ensure that their client provides their account information and a signed End User License Agreement to FedEx in order to obtain a production test meter

Certification Requirements for Commercial Developers

- You must be a member of the FedEx Compatible Solutions Program in order to distribute your software. For further information and to register for the CSP click here.
- CSP Members receive guidance and support from the CSP program.
- · All Services distributed by a Commercial Developer must be certified by FedEx.
- The CSP team will assist you in determining the best path for certifying your product. Your exact certification process will depend on the nature of your implementation.

Note about the Production Key

FedEx account billing contact information is required to complete the production registration process.

After receiving the Production Key, Production Password (Security Code) and Production Meter Number, this information must replace the previously supplied Test Developer's Key, Test Password (Security Code) and Meter number within the Web services transactions that are sent to the FedEx Production Environment.

- navigieren Sie zu Menupunkt "Move To Production"
- klicken Sie das Icon "Obtain Developer Production Key"
